

## SEDIMENTARY ROCKS

Formation- Weathering and Erosion of any Rock.

Weathering-Breaking down of rock into fragments/pieces

Erosion-Transport of rock by Water, Wind, Ice, Gravity

Larger, Denser sediments are deposited FIRST; Resulting in Horizontal Sortin/Layering.

Smaller

Bigger

75% of rocks on Earth are sedimentary. They form a thin layer/veneer over the Earth.

Fossils are ONLY found in SEDIMENTARY ROCKS!!

ESRT p. 7

### Inorganic/Land Derived

Made from Sediments

Organized by Grain Size

Compact and Cemented by natural Cements

Contain FOSSILS / LAYERS

### Chemical/Organically Formed

Made from predecipates/evaporates from Seawater

Organized by composition. Ex. Halite – Rock Salt

Fossils

Plant Remains
